

The Biological Range

These natural biological products have been developed to resolve cleaning and maintenance problems which just cannot be addressed with conventional chemicals.

Many types of harmless bacterial strains are included in the products to degrade problems quickly and completely.

Unlike some cure-all products, each of our biological products has been created to address a specific problem. When extra power, or faster results are necessary we sometimes include enzymes, offering a simple and cost-effective solution to long-term problems.

All our biological products are stable, with good shelf-life.

Micro Clean

This simple to-use biological cleaner contains many different strains of specially selected micro-organisms that produce enzymes and degrade all types of organic soiling. Micro Clean is a biological stain and odour eradicator, ideal for use on carpets, upholstery fabrics and flooring where soiling such as body fluids and spilt beverages has been absorbed into the fabric. Especially useful around urinals, walkways and areas contaminated with urine or vomit etc. A little Micro Clean will also remedy odours from sink outlets, baths, showers and kitchen waste units.

Product code: MC1, MC5

Blu-Away

Similar to Micro Clean, but Blu-Away has been specially formulated for use throughout the washroom, and to clean and maintain low-volume or waterless urinal systems. Blu-Away eradicates odours and staining from urine whilst also degrading uric acid and lime-scale deposits in urinals, toilet bowls and on washroom surfaces. Containing millions of specially selected, highly active micro-organisms, with a refreshing mint fragrance, this unique biological cleaner is the perfect product to replace conventional washroom cleaners and provides the complete environmental washroom package when used with our biological urinal blocks, Toss Blocks.

Product code: BA750, BA1, BA5

Drain Solution

A powerful blend of selected micro-organisms and "free" enzymes that efficiently and safely reduce the greasy wastes typically evacuated into drainage systems. Improves flow rates and prevents odour problems in the small-bore pipes flowing from sinks, baths, showers and kitchen macerators.

Product code: DS1, DS5

Royal Flush Toilet and Commode Fluid

A concentrated, blend of detergents, micro-organisms and enzymes that quickly digest and liquifies effluent solids. Formulated specially for use in all types of portable toilets and commodes to prevent odours and facilitate easy discharge. Royal Flush safely replaces formaldehyde and quaternary ammonium products and is compatible with all types of sewage treatment systems, including septic tanks.

Product code: RFTF1, RFTF5, RFTF20

Royal Flush Sachets

All the benefits from Royal Flush Fluid in a soluble sachet. Simply drop one or more sachets into the bowl and flush into the holding tank to maintain odour-free portable toilet systems. Particularly popular with coach operators and mobile toilet-hire companies as storage of the sachets takes minimal space.

Product code: RF-SAC50

Bio Clear

Formulated to degrade the fatty waste discharged into pipes, sewers and grease-traps, Bio Clear is a powerful liquid containing selected micro-organisms and "free" enzymes that quickly reduces solids and grease evacuated into the drain outlets from all types of catering and high-volume food processing units.

Bio Clear is suitable for delivery through an auto-pump to maintain all types of drains, sinks and small bore pipes as well as re-activating and maintaining septic tanks, grease traps and complete sewage systems.

Product code: BC5, BC20

Bio Dose

A cost-effective biological treatment fluid for the maintenance of all waste systems. Bio Dose is ideally dispensed via an automated pump directly into the drain-run to the grease-trap or sewage system, so the bacteria and enzymes can degrade fatty waste and solids to keep the system working efficiently.

Product code: BD5, BD25

Bio Mix

A dry biological powder containing millions of selected micro-organisms and "free" enzymes that efficiently degrade greasy waste and solids evacuated into drainage systems from kitchens and food processing units. Bio Mix is suitable for use in all types of drains, sinks and small bore pipes as well as for maintaining domestic and commercial septic tanks, grease traps and overloaded sewage systems.

Product code: BM500, BM2.5

Toss Blocks / Bio Blocks

The original biological urinal blocks. Toss Blocks contain special bacterial cultures that clean and deodorise urinal traps and pipes while enabling great savings of water to be made. Whilst we do not advocate "waterless urinals" a typical urinal need only be flushed about 3 times each day when using Toss Blocks.

The pictures show two urinal outlets after 6 months use - one using Toss Blocks, the other no blocks. Toss Blocks do not contain pDCB or other dangerous chemicals and are particularly suitable for use in public buildings, schools, institutions, hotels, pubs, clubs and restaurants etc, especially when used with Blu-Away.

Product code: TB1, BB

Urinal Screen and Biological Block

The screen has been designed to prevent cigarettes, gum & paper blocking the urinal while the large biological block (see Toss Block) continuously maintains the urinal pipe and trap, degrading the organic waste and uric scale that causes odours and blockages.

Product code: USB

Royal Flush Biological Cistern Block

Based upon our conventional Royal Flush Cistern Block delivering blue colour and chemical cleaning with the additional benefits of biological cleaning action.

The water-softening and sequestering agents maintain a clean bowl, while the biological cleaning power works in the pipes to prevent the build-up of solids. Especially useful in small-bore, pumped toilet systems and older buildings where drain-runs can be problematic.

Product code: RFPB
